

BRICKSPLAZA

EVERY BRICK, EVERY BUILD.

E-COMMERCE PLATFORM MERCHANDISING & ADVERTISING SYSTEM EXPANSION

Addendum to the E-Commerce Platform Technical Specification v1.0, Section 07

Version 1.0

A Specialised Operating Division of Besbpo Group

01 — Purpose & Scope

The original E-Commerce Platform Technical Specification (Section 07) shipped 10 genuine product-merchandising rails alongside 6 structural/informational sections (Hero, Project Gallery, Delivery Map, Trust Strip, Newsletter, Recently Viewed) — 16 sections total. This addendum expands the merchandising count itself from 10 to 16, and adds an 8-slot advertising system across the customer journey, in line with the scale already established for the Aluminium Store platform.

This is an addendum, not a replacement — all 6 structural sections and the 10 original merchandising rails from Section 07 remain unchanged. The homepage now runs 16 merchandising rails + 6 structural sections + 8 ad slots interspersed throughout.

02 — Merchandising Sections — The Original 10

#	Section	What it shows
1	Trending Now	Real-time best-selling SKUs, updated from order velocity
2	Recent Arrivals	Newest catalogue additions
3	Bundles & Combos	Curated multi-SKU project bundles
4	Clearance Sale	Discontinued colourways, overstock, cancelled MTO
5	Shop by Category	All 21 categories, grouped into 4 families
6	Shop by Sector	Commercial / Industrial / Institutional / Civil / Residential entry points
7	Colour-Matched Collections	Face + semi-face + paver groupings by colourway
8	Best Sellers	Highest-rated and highest-volume SKUs
9	New to the Range	AAC, CSEB, Brick Slips, Braai Kits explained
10	Customer Favourites	Ratings-driven carousel (4.5★+ only)

03 — Merchandising Sections — 6 New Additions

Each new section is deliberately distinct from every existing rail — no two sections compete for the same shopper intent:

#	Section	What it shows — and how it differs from existing rails
11	Browse by Colour Swatch	A clickable 14-colourway swatch grid — a navigation entry point distinct from the curated Colour-Matched Collections

#	Section	What it shows — and how it differs from existing rails
		feature, letting a shopper pick “Autumn Red” and see everything available in it across every category
12	Shop by Project Type	Curated project-based collections: Driveway & Paving, Garden Wall & Landscaping, New Build Structural, Braai & Outdoor Living — groups SKUs the way a shopper actually plans a project, not by category taxonomy
13	Editor's Picks	Bricksplaza's own merchandising team recommendations — deliberately distinct from the algorithmic/ratings-driven rails, a human editorial voice in the mix
14	Value Picks	Everyday affordable commodity lines (common brick, standard block) surfaced for budget-conscious shoppers — distinct from Clearance Sale, which is about discontinued stock, not everyday value
15	Trade & Bulk Specials	Surfaces Volume-tier bulk pricing directly on the homepage, nudging qualifying shoppers toward trade-account registration
16	Recently Restocked	Previously low/out-of-stock popular items now back — distinct from Recent Arrivals (new catalogue additions), this drives urgency and return visits

04 — Updated Homepage Structure

Homepage Merchandising Rail — 16 Sections + 8 Ad Slots

HEADER + HERO SLIDER (unchanged)
+ AD SLOT 1 — Homepage Hero Banner (1600×400)
STATS BAR (unchanged)
1. Trending Now
2. Recent Arrivals

Figure 1 — Full homepage rail: 16 merchandising sections, 6 structural sections, 8 ad slots

05 — Ad System — Overview

The 8-slot ad system serves two purposes: internally-driven merchandising campaigns (seasonal pushes, trade-account acquisition, bundle promotion) and, longer-term, supplier co-op advertising — a revenue line where manufacturing partners pay for placement against relevant categories, consistent with the CMI (Contract Manufacturing Issuer) positioning already established for the Group's materials divisions.

- All 8 slots are managed from the Business Desk's existing Promotion/Banner Manager (E-Commerce Spec Section 16) — no new CMS build required, only new placement zones
- Slots 1–4 sit on the homepage merchandising rail; Slots 5–8 are spread across search, product, cart and post-purchase — covering the full customer journey, not just the front door
- Every slot ships with a defined pixel size so creative production (Step 2 of this development track) has a fixed spec to design against

06 — Ad Slot Architecture

#	Slot Name	Placement	Size (px)	Purpose
1	Homepage Hero Banner	Homepage, below hero slider	1600×400	Major campaigns — launch promotions, seasonal pushes, new-category announcements
2	Homepage Mid-Page Banner	Homepage, after Section 5	1600×300	Secondary campaign or seasonal promotion
3	In-Rail Native Banner	Homepage, after Section 9	1200×250	Category-family promotion (e.g. paving season) or supplier co-op
4	In-Rail Native Banner	Homepage, after Section 13	1200×250	Trade-account acquisition push or bundle promotion
5	Search Results Banner	Top of search results page	1200×150	Sponsored-style placement, category-relevant to the search term
6	Product Cross-Sell Banner	Product page, below “You may also like”	800×200	Bundle promotion or supplier co-op tied to the viewed SKU's category
7	Cart Banner	Cart page, above order summary	700×150	Last-chance upsell — jointing sand, sealer, delivery upgrade
8	Thank You Banner	Order confirmation page	700×150	Post-purchase — referral programme or next-project inspiration

Ad Slots Across the Customer Journey (Slots 5-8)

Figure 2 — Ad slots 5-8 mapped across the post-homepage customer journey

07 — Ad Content Strategy — Launch Campaigns

- Slot 1 (Hero Banner): Bricksplaza launch campaign — “Every Brick, Every Build” brand awareness push for the first 60 days, then rotates to seasonal/category campaigns
- Slot 2 (Mid-Page Banner): Strategic Partners programme awareness — driving Construction Companies, Property Developers and Hardware Stores toward their dedicated pages
- Slots 3-4 (In-Rail Native): category-family rotation — paving season, braai season (Slot 15/Braai Kits tie-in), new-category spotlight (AAC, CSEB)
- Slot 5 (Search Banner): category-relevant to the active search term, computed automatically rather than manually scheduled
- Slot 6 (Product Cross-Sell): bundle promotion tied to the viewed SKU's category (e.g. paver page → jointing sand and sealer bundle)
- Slot 7 (Cart Banner): last-chance sundries upsell, or a delivery-tier upgrade offer
- Slot 8 (Thank You Banner): referral programme (Section 06 of the Construction Companies Communication Strategy) or a “start your next project” prompt

08 — Governance

Ad content follows the same draft/publish workflow already specified for the CMS (E-Commerce Spec Section 16): a merchandiser schedules creative and a date range from the Promotion/Banner Manager, with a preview link before it goes

live. No slot auto-populates from a third-party ad network at launch — all 8 slots are Bricksplaza-controlled and Bricksplaza-scheduled until a supplier co-op programme is formally scoped.

09 — Next Steps

- Step 2: Source real imagery and produce the actual creative for all 8 ad slots at the sizes specified in Section 06, packaged as a ZIP
- Step 3: Update the Bricksplaza corporate website to reflect the expanded merchandising capability and forthcoming ad-supported model
- Step 4: DFI/bank investment package covering the Strategic Partners divisions and the Midrand & Cato Ridge production/fulfilment yards
